## VT576914 Instructions

1. Remove lids from bike. Remove speaker grill from lids. Disassemble the ABS plates from each other. Pay attention to how they come apart
2. Remove all the plastic that forms the “basket” from the bottom of the lid. You are creating a flat surface for the VT576914 adapter plates to mount to. The lid should now look like the photo #1.
3. Drill out the the 4 holes that originally held the stock speaker in place. We will use these holes to mount the first (small) part of the VT576914 to the underside of the lid. The large head Phillips screws will go through the top of the lid into the adapter plate and hold it in place. Use a thin bead of silicone between the plate and the lid.
4. Re-install the stock speaker grill.
5. Mount the second (larger) plate to the back of the first plate using the countersunk screws that were removed in step 1.
6. Mount the 6x9 speakers to the back of the second plate.
